To: complaints@pmcpa.org.uk

The website form didn't seem to be working so I have sent the complaint here by email.

Clause 26.2 states that "Information about prescription only medicines which is made available to the public either directly or indirectly must be factual and presented in a balanced way. It must not raise unfounded hopes of successful treatment or be misleading with respect to the safety of the product." Whilst it is unlikely that the three companies who make COVID19 vaccines had influence over the government's recent unethical and false press release concerning efficacy in clinically extremely vulnerable groups and particularly the immune compromised, I here argue that they had a duty to correct the errors made by the government by initially urging the government to take a more responsible approach and failing that by issuing press statements themselves to avoid the risk that patients with blood cancer and other reasons for immune compromise would be falsely assured that the vaccines work well in them and would hence put themselves at risk of death. Acts of omission may not at first glance be relevant under the Code of Practice but there is a precedent for that in regard to disclosure of clinical trial results for example. I believe that the companies should have made a statement and not doing so is a public health risk and also brings the industry indirectly into disrepute if this lapse becomes clear. AT the moment the false information is circulating in an unchallenged manner and their medicines have been effectively promoted incorrectly on their behalf by a body that should be trusted but in this case has let us down. The details of my complaint have been made public on my website and I include a PDF of that and other relevant documents. If ABPI would like to make a comment in the meantime they are most welcome to do so and I will include it. URL of open letter/complaint
